

## NOTICE

This document is the Final Demand-Intermediate Demand (FD-ID) system version of the PPI news release. With the January 2014 PPI data release in February 2014, BLS will transition from the Stage of Processing to the FD-ID aggregation system. This document will be labeled “Experimental” through the December 2013 release in January 2014 and will be posted to the PPI Experimental Aggregation webpage (<https://www.bls.gov/ppi/experimentalaggregation.htm>) about two weeks after each month’s scheduled PPI release. That webpage also contains detailed methodological information for the FD-ID aggregation system. With the publication of January 2014 PPI data in February 2014, the FD-ID version of the PPI news release will become the official PFEI news release document of record.

## PRODUCER PRICE INDEXES – AUGUST 2013

The Producer Price Index for final demand rose 0.2 percent in August, seasonally adjusted. This increase followed advances of 0.4 percent in July and 0.6 percent in June. On an unadjusted basis, the index for final demand moved up 1.9 percent for the 12 months ended in August, matching the July 12-month increase. Within intermediate demand (business purchases, excluding capital investment), prices for processed goods for intermediate demand were unchanged in August, the index for unprocessed goods for intermediate demand decreased 2.7 percent, and services for intermediate demand advanced 0.5 percent. (See tables A, B, and C.)

**Chart 1. One-month percent changes in selected PPI final demand price indexes, seasonally adjusted**

**Chart 2. Twelve-month percent changes in selected PPI final demand price indexes, not seasonally adjusted**

**Table A. Monthly and 12-month percent changes in selected final demand price indexes, seasonally adjusted**

Month	Total final demand	Final demand goods				Final demand services				Change in final demand from 12 months ago (unadj.)
		Total	Foods	Energy	Less foods and energy	Total	Trade	Transportation and warehousing	Other

1 Some of the figures shown above and elsewhere in this release may differ from those previously reported because data for April 2013 have been revised to reflect the availability of late reports and corrections by respondents.

## **Final Demand**

*(Final demand includes goods, services, and construction which are sold for personal consumption, capital investment, U.S. Government, and export.)*

In August, the 0.2-percent increase in the final demand index is attributable to a 0.3-percent advance in prices for final demand services and a 0.1-percent rise in the index for final demand goods. (See table A.)

**Final demand services:** The index for final demand services moved up 0.3 percent in August, the third consecutive advance. The August rise was broad based, with nearly half the increase the result of prices for final demand services less trade, transportation, and warehousing, which climbed 0.3 percent. The index for final demand trade services (measuring changes in margins received by wholesalers and retailers) advanced 0.4 percent, and prices for final demand transportation and warehousing services moved up 0.5 percent.

**Commodity detail:** A major factor in the rise in the index for final demand services was prices for portfolio management, which increased 2.1 percent. The indexes for machinery and equipment wholesaling; flooring and floor coverings retailing; apparel, jewelry, and accessories retailing; deposit services (partial); and airline passenger services also moved higher. In contrast, margins for food wholesaling fell 2.4 percent. The indexes for traveler accommodation services and apparel wholesaling also moved lower in August. (See table 4.)

**Final demand goods:** The index for final demand goods edged up 0.1 percent in August following no change in July. In August, the increase was the result of prices for final demand energy goods, which rose 0.9 percent. In contrast, the index for final demand foods fell 0.6 percent. Prices for final demand goods less foods and energy were unchanged.

*Commodity detail:* Leading the advance in the index for final demand goods, prices for gasoline advanced 2.6 percent. The indexes for fresh and dry vegetables, processed poultry, liquefied petroleum gas, and primary basic organic chemicals also moved higher. In contrast, corn prices dropped 15.2 percent. The indexes for soybeans, home heating oil, and motor vehicles also decreased.

**Special grouping, Final demand less foods and energy (final demand core):** The index for final demand less foods and energy increased 0.3 percent in August following advances of 0.4 percent in both July and June. (The index for final demand less foods and energy represents about 87.6 percent of final demand.) For the 12 months ended August 2013, prices for final demand less foods and energy rose 2.2 percent, the fastest rate of increase since a 2.2-percent advance in May 2012.

**Special grouping, Finished goods:** The index for finished goods rose 0.3 percent in August after no change in July and a 0.8-percent advance in June. (The finished goods index represents about two-thirds of final demand goods and one-quarter of final demand.) In August, the indexes for finished consumer energy goods and finished consumer foods increased 0.8 percent and 0.6 percent, respectively. Prices for finished goods less foods and energy were unchanged. Within finished goods, rising prices for gasoline, fresh and dry vegetables, liquefied petroleum gas, processed poultry, soft drinks, and pet food outweighed declining prices for residential natural gas, motor vehicles, and meats.

## **Intermediate Demand**

*(Intermediate demand includes goods, services, and maintenance and repair construction sold to businesses, excluding capital investment. BLS publishes two parallel treatments of intermediate demand, each constructed from the identical set of commodity price indexes. The first treatment organizes commodities according to commodity type, and the second organizes commodities using a stage-based, production flow model. See the technical note for more information.)*

## **Intermediate Demand by Commodity Type**

**Processed goods for intermediate demand:** The index for processed goods for intermediate demand was unchanged in August, the same as in July. In August, a 0.6-percent increase in prices for processed energy goods and a 0.2-percent advance in the index for processed goods less foods and energy offset a 2.3-percent decrease in prices for processed foods and feeds. For the 12 months ended in August, the index for processed goods for intermediate demand moved up 0.5 percent, compared with a 1.3-percent rise in July. (See table B.)

*Commodity detail:* Among prices for processed goods for intermediate demand in August, the index for jet fuel climbed 4.5 percent. Prices also increased for gasoline, primary basic organic chemicals, commercial electric power, and lubricating oil base stocks. In contrast, the index for prepared animal feeds dropped 7.0 percent. Prices for utility natural gas, ethanol, fertilizer materials, and synthetic rubber also moved down in August. (See table 5.)

**Table B. Monthly and 12-month percent changes in selected intermediate demand price indexes for goods by commodity type, seasonally adjusted**

Month	Processed goods for intermediate demand					Unprocessed goods for intermediate demand

Aug.....	0.0	-2.3	0.6	0.2	0.5	-2.7	-4.3	-2.7	-0.4	1.6

<sup>1</sup> Some of the figures shown above and elsewhere in this release may differ from those previously reported because data for April 2013 have been revised to reflect the availability of late reports and corrections by respondents.

**Unprocessed goods for intermediate demand:** The index for unprocessed goods for intermediate demand moved down 2.7 percent in August, the largest decline since a 3.0-percent drop in June 2012. Leading the decrease in August, prices for unprocessed foodstuffs and feedstuffs fell 4.3 percent. The index for unprocessed energy goods moved down 2.7 percent, and prices for unprocessed nonfood materials less energy fell 0.4 percent. For the 12 months ended in August, the index for unprocessed goods for intermediate demand advanced 1.6 percent, the lowest rate since no change for the 12 months ended March 2013.

*Commodity detail:* A 15.2-percent drop in corn prices accounted for nearly 40 percent of the decrease in the index for unprocessed goods for intermediate demand. The indexes for natural gas; hay, hayseeds, and oilseeds; slaughter chickens; crude petroleum; and raw milk also fell in August. In contrast, slaughter cattle prices increased 3.5 percent. The indexes for fresh and dry vegetables and for nonferrous metal ores also moved higher.

**Services for intermediate demand:** The index for services for intermediate demand climbed 0.5 percent in August, the largest advance since a 0.5-percent rise in November 2012. Leading the broad-based increase in August, prices for services less trade, transportation, and warehousing for intermediate demand moved up 0.3 percent. In addition, the indexes for transportation and warehousing services for intermediate demand and trade services for intermediate demand advanced 0.8 percent and 0.6 percent, respectively. For the 12 months ended in August, the index for services for intermediate demand advanced 2.4 percent, the largest increase since a 2.4-percent rise in April. (See table C.)

*Commodity detail:* In August, a 1.3-percent advance in the index for architectural and engineering services was a major contributor to the rise in prices for services for intermediate demand. The indexes for metals, minerals, and ores wholesaling; portfolio management; securities brokerage, dealing, and investment advice; freight forwarding; and deposit services (partial) also increased. In contrast, prices for management, scientific, and technical consulting services fell 1.9 percent in August. Margins for hardware and building materials retailing and for food wholesaling also declined.

**Table C. Monthly and 12-month percent changes in selected intermediate demand price indexes for services by commodity type, seasonally adjusted**

## Intermediate Demand by Production Flow

**Stage 4 intermediate demand** (*The stage 4 intermediate demand index measures price changes for products purchased by industries that primarily produce output sold to final demand.*): The index for stage 4 intermediate demand increased 0.3 percent in August, the third consecutive rise. In August, prices for total services inputs to stage 4 intermediate demand climbed 0.5 percent and the index for total goods inputs edged up 0.1 percent. (See table D.) Higher prices for portfolio management; jet fuel; gasoline; architectural and engineering services; metals, minerals, and ores wholesaling; and nonferrous metals outweighed lower prices for corn; management, scientific, and technical consulting services; and food wholesaling. (See table 6.) For the 12 months ended in August, the index for stage 4 intermediate demand rose 1.4 percent, the smallest 12-month advance since a 1.2-percent increase in May 2013.

**Stage 3 intermediate demand** (*The stage 3 intermediate demand index measures price changes for products purchased by industries that primarily produce output sold to industries classified in stage 4.*): The index for stage 3 intermediate demand edged down 0.1 percent in August following a 0.2-percent decrease in July. In August, prices for total goods inputs to stage 3 intermediate demand declined 0.2 percent. In contrast, the index for total services inputs rose 0.2 percent. Falling prices for slaughter chickens; corn; management, scientific, and technical consulting services; natural gas to electric utilities; and synthetic rubber outweighed higher prices for slaughter cattle; gasoline; nonferrous metals; and courier, messenger, and U.S. postal services. For the 12 months ended in August, the index for stage 3 intermediate demand advanced 1.4 percent, the smallest 12-month rise since a 1.3-percent increase in April 2013.

**Table D. Monthly percent changes in selected intermediate demand price indexes by production flow, seasonally adjusted**

Month	Stage 4 intermediate demand			Stage 3 intermediate demand			Stage 2 intermediate demand			Stage 1 intermediate demand

Aug.....	0.3	0.1	0.5	-0.1	-0.2	0.2	-0.9	-1.8	0.4	0.6	0.5	0.6

<sup>1</sup> Some of the figures shown above and elsewhere in this release may differ from those previously reported because data for April 2013 have been revised to reflect the availability of late reports and corrections by respondents.

**Stage 2 intermediate demand** (*The stage 2 intermediate demand index measures price changes for products purchased by industries that primarily produce output sold to industries classified in stage 3.*): The index for stage 2 intermediate demand fell 0.9 percent in August, the first decrease since a 1.7-percent drop in March 2013. In August, prices for total goods inputs to stage 2 intermediate demand declined 1.8 percent. In contrast, the index for total services inputs to stage 2 intermediate demand advanced 0.4 percent. Lower prices for natural gas; corn; crude petroleum; soybean cake and meal; ethanol; and management, scientific, and technical consulting services outweighed higher prices for metals, minerals, and ores wholesaling; liquefied petroleum gas; and nonferrous metals. For the 12 months ended in August, the index for stage 2 intermediate demand advanced 2.5 percent, the smallest 12-month rise since a 2.0-percent increase in April 2013.

**Stage 1 intermediate demand** (*The stage 1 intermediate demand index measures price changes for products purchased by industries that primarily produce output sold to industries classified in stage 2.*): The index for stage 1 intermediate demand rose 0.6 percent in August, the largest rise since a 0.9-percent increase in February 2013. In August, prices for total goods inputs to stage 1 intermediate demand climbed 0.5 percent, and the index for total services inputs moved up 0.6 percent. Higher prices for primary basic organic chemicals; nonferrous scrap; gasoline; portfolio management; commercial electric power; and metals, minerals, and ores wholesaling outweighed lower prices for utility natural gas, ethanol, and traveler accommodation services. For the 12 months ended August 2013, the index for stage 1 intermediate demand increased 1.7 percent, the third consecutive 12-month advance.

# Technical Note

## Brief Explanation of Producer Price Indexes

The Producer Price Index (PPI) of the Bureau of Labor Statistics (BLS) is a family of indexes that measures the average change over time in prices received (price changes) by producers for domestically produced goods, services, and construction. PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI). CPIs measure price change from the purchaser's perspective.

More than 10,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors. Over time, new PPIs have been introduced for products of industries in the services and construction sectors of the U.S. economy. As of January 2013, the PPI covered about 70 percent of services as measured by 2007 Census revenue, and 34 percent of construction.

More than 100,000 price quotations per month are organized into three sets of PPIs: (1) Final demand-Intermediate demand (FD-ID) indexes, (2) commodity indexes, and (3) indexes for the net output of industries and their products. The FD-ID structure organizes products by class of buyer and degree of fabrication as well as by stage of production. The commodity structure organizes products by similarity of end use or product type. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

### Final Demand–Intermediate Demand Indexes

The PPI FD-ID structure measures price change for goods, services, and construction sold to final demand and to intermediate demand. The FD-ID system replaced the PPI stage-of-processing system as PPI's primary aggregation model with the release of data for January 2014. The FD-ID model expands coverage beyond that of the stage-of-processing system through the addition of services, construction, exports, and government purchases.

FD-ID indexes are constructed from commodity-based producer output price indexes. Commodities are allocated to aggregate indexes primarily based on the type of buyer. The main source of data used to determine the type of buyer is the "Use of commodities by industries, before redefinition," table from the Benchmark Input-Output Accounts of the U.S. In many cases, the same commodity is purchased by different types of buyers. As a result, commodities are often included in several FD-ID indexes. For example, regular gasoline is purchased for personal consumption, export, government use, and business use. The PPI program publishes only one commodity index for regular gasoline (wpu057104), reflecting sales to all types of buyers, and this index is used in all aggregations regardless of whether the gasoline is sold for personal consumption, as an export, to government, or to businesses. Proportions based on BEA "Use of Commodities" data are used to allocate the correct portion of the total weight of gasoline to each use category. In cases when buyer type is

an important price determining characteristic, indexes are created based on specific buyer type. For example, within the PPI category for loan services, separate indexes for consumer loans and business loans were constructed. For more information relating to the FD-ID structure, see "A new, experimental system of indexes from the PPI program" in the February 2011 *Monthly Labor Review*.

**Final Demand:** The final demand portion of the FD-ID structure measures price change for commodities sold for personal consumption, capital investment, government, and export. The system is composed of six main price indexes: final demand goods; final demand trade services; final demand transportation and warehousing services; final demand services less trade, transportation, and warehousing; final demand construction; and overall final demand.

The final demand goods index measures price change for both unprocessed and processed goods sold to final demand. Fresh fruits sold to consumers and computers sold for capital investment are examples of transactions included in the final demand goods price index. The final demand trade services index measures price change for the retailing and wholesaling of merchandise sold to final demand, generally without transformation. (Trade indexes measure changes in margins received by wholesalers and retailers.) The final demand transportation and warehousing services index tracks price change for transportation of passengers, as well as, transportation of cargo sold to final demand, and also includes prices for warehousing and storage of goods sold to final demand. The final demand services less trade, transportation, and warehousing index measures price change for all services other than trade and transportation sold to final demand. Publishing, banking, lodging, and health care are examples of these services. The final demand construction index tracks price change for new construction, as well as maintenance and repair construction sold to final demand. Construction of office buildings is an example of a commodity that would be included in the final demand construction index. Lastly, the overall final demand index tracks price change for all types of commodities sold to final demand by combining the five final demand component indexes described above.

**Intermediate Demand:** The intermediate demand portion of the FD-ID system tracks price change for goods, services, and construction products sold to businesses as inputs to production, excluding capital investment. The system includes two parallel treatments of intermediate demand. The first treatment organizes intermediate demand commodities by type. The second organizes intermediate demand commodities into production stages, with the explicit goal of developing a forward-flow model of production and price change.

The intermediate demand by commodity type portion of the system organizes commodities by similarity of product. The system is composed of six main price indexes: unprocessed goods for intermediate demand; processed goods for intermediate demand; intermediate demand trade services; intermediate demand transportation and warehousing services; intermediate demand services less trade, transportation, and warehousing; and intermediate demand construction.

The unprocessed goods for intermediate demand price index measures price change for goods sold to businesses as inputs to production that have undergone no fabrication. Crude petroleum sold to refineries is an example of an unprocessed good sold to intermediate demand. The processed goods for intermediate demand index tracks price change for fabricated goods sold as business inputs. Examples include car parts sold to car manufacturers and gasoline sold to trucking companies. The index for trade services for intermediate demand measures price change for the services of retailing and wholesaling goods purchased by businesses as inputs to production. The intermediate demand transportation and warehousing services index measures price change for business travel, as well as, transportation and warehousing of cargo sold to intermediate demand. The intermediate demand services less trade, transportation, and warehousing index measures price change for services other than trade, transportation, and warehousing sold as inputs to production. Legal and accounting services purchased by businesses are examples of intermediate demand services excluding trade, transportation, and warehousing. Finally, the construction for intermediate demand index measures price change for construction purchased by firms as inputs to production. The index for construction for intermediate demand tracks price change for maintenance and repair construction purchased by firms.

The production flow treatment of intermediate demand is a stage-based system of price indexes. These indexes can be used to study price transmission across stages of production and final demand. This system is constructed in a manner that maximizes forward flow of production between stages, while minimizing back-flow of production. The production flow treatment contains four main indexes: intermediate demand stage 1, intermediate demand stage 2, intermediate demand stage 3, and intermediate demand stage 4.

Indexes for the four stages were developed by first assigning each industry in the economy to one of four stages of production, where industries assigned to the fourth stage primarily produce output consumed as final demand, industries in the third stage primarily produce output consumed by stage 4 industries, industries assigned to the second stage primarily produce output consumed by stage 3 industries, and industries assigned to the first stage produce output primarily consumed by stage 2 industries. The four indexes then track prices for the net inputs consumed by industries in each of the four stages of production. The stage 4 intermediate demand index, for example, tracks price change for inputs consumed, but not produced, by industries included in the fourth stage of production. Hence, the index tracks price change in inputs to industries that primarily produce final demand commodities (stage 4 producers primarily produce commodities sold to final demand).

Examples of heavily weighted goods-producing industries in stage 4 include the manufacture of light trucks and utility vehicles, automobiles, and pharmaceuticals. Retail trade, food service and drinking places, and hospitals are examples of heavily weighted service industries included in stage 4. Stage 4 also includes all new construction industries. Examples of goods consumed by stage 4 industries include motor vehicle parts, commercial electric power, plastic construction products, biological products, and beef and veal. Engineering

services, machinery and equipment wholesaling, long distance motor carrying, and legal services constitute examples of services consumed by stage 4 industries.

Examples of highly weighted goods-producing industries included in stage 3 are motor vehicle parts manufacturing, animal (except poultry) slaughtering and processing, and semiconductor manufacturing. Services industries classified in stage 3 include wholesale trade; insurance carriers; architecture, engineering, and related services; and hotels and motels. Examples of goods consumed by stage 3 industries include slaughter steers and heifers, industrial electric power, and hot rolled steel bars, plates, and structural shapes. Services commonly consumed by stage 3 industries include commissions from sales of property and casualty insurance, business loans, temporary help services, and administrative and general management consulting services.

Petroleum refineries; electricity generation, transmission, and distribution; natural gas distribution; cattle ranching and farming; and plastic materials and resin manufacturing are among the goods-based industries assigned to stage 2. Services industries that are heavily weighted in stage 2 include management of companies and enterprises; non-depository credit intermediation; insurance agencies and brokerages; and services to buildings and dwellings. Goods commonly purchased by stage 2 industries include crude oil, natural gas, formula feeds, and primary basic organic chemicals. Services that are heavily weighted in the intermediate demand stage 2 index are legal services, business loans, and cellular phone and other wireless telecommunication.

Goods producing industries in stage 1 include oil and gas extraction, paper mills, and grain farming. Real estate, legal services, and advertising services are examples of highly weighted services industries included in stage 1. Examples of goods consumed by stage 1 industries are commercial and industrial electric power and gasoline. Services commonly consumed by stage 1 industries include solid waste collection, chemicals and allied products wholesaling, and guestroom or unit rental. It should be noted that all inputs purchased by stage 1 industries are by definition produced either within stage 1 or by latter stages of processing, leaving stage 1 less useful for price transmission analysis. For additional information on industry stage assignments, see <https://www.bls.gov/ppi/industryflowstage.htm>.

## Commodity Indexes

The commodity classification of the PPI organizes goods, services, and construction by similarity of product or end use, disregarding industry of origin. With the release of data for July 2009, PPI expanded its commodity structure to include indexes for services and construction products. Prior to this date, the PPI commodity structure only included products from goods producing sectors. Table 9 of the *PPI Detailed Report* includes data for commodity indexes, organized in a hierarchal structure, including major groupings, subgroups, product classes, sub-product classes, and individual items.

## Industry Net-Output Price Indexes

PPIs for the net output of industries and their products are grouped according to the North American Industry

Classification System (NAICS). Prior to the release of January 2004, industry-based PPIs were published according to the Standard Industrial Classification (SIC) system. Industry price indexes are compatible with other economic time series organized by industry, such as data on employment, wages, and productivity. Table 11 of the *PPI Detailed Report* includes data for NAICS industries and industry groups (3-, 4-, 5-, and 6-digit codes), Census product classes (7- and 8-digit codes), products (9-digit codes), more detailed sub-products (11-digit codes), and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product categories. Every industry has primary product indexes that show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products make up a plurality of its total shipment value. In addition, most industries have secondary product indexes that show changes in prices received by establishments classified in the industry for products chiefly made in some other industry. Finally, some industries have miscellaneous receipts indexes that track price changes for other sources of revenue received by establishments within the industry that are not derived from sales of their products—for example, resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

## Data Collection

PPIs are constructed using selling prices reported by establishments of all sizes, selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms also are chosen by probability proportionate to size. BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices submitted by survey respondents are effective on the Tuesday of the week containing the 13th day of the month. The survey is conducted via Internet, mail, and fax.

Price data are provided on a voluntary and confidential basis; only sworn BLS employees are allowed access to individual company price reports. BLS publishes price indexes instead of actual prices. All PPIs are subject to revision 4 months after original publication to reflect the availability of late reports and corrections by respondents.

BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Results of these resampling efforts are incorporated into the PPI with the release of data for January and July.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an increasing number of service and construction sector industries have been introduced into the PPI. The following list of industries introduced since the mid-1990s includes the month and year in which an article describing the industry's content appeared in the *PPI Detailed Report*.

### Service and construction sector industries introduced into the Producer Price Index, by SIC or NAICS code and the *PPI Detailed Report* that announces their introduction

## Weights

Weights for most commodity groupings of the PPI, as well as, weights for commodity-based aggregate indexes calculated from commodity groupings, such as FD-ID indexes, currently reflect 2007 values of shipments as reported in the *Census of Manufactures* and other sources. From January 2007 to December 2011, PPI weights were derived from 2002 shipment values. Industry indexes now are calculated under the 2012 NAICS structure utilizing 2007 value of shipment weights and 2002 net output ratios. The periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy.

Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments within the industry to buyers outside the industry. However, weights for commodity indexes are based on gross shipment values, including values of shipments between establishments within the same industry. As a result, broad commodity grouping indexes, such as the PPI for All Commodities (which is composed of major commodity groupings 01 through 15), are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. The intermediate demand by commodity type FD-ID indexes partially correct for this defect, but industry indexes, final demand FD-ID indexes, and

intermediate demand by production flow FD-ID indexes consistently correct for this at all levels of aggregation. Therefore, industry and FD-ID indexes are more appropriate than broad commodity groupings for analysis of general price trends.

## Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including most commodity groups and individual items) were placed on a new reference base, 1982 = 100. From 1971 through 1987, the standard reference base for most PPI series was 1967 = 100. Except for rounding differences, the shift to the new reference base did not alter any previously published percent changes for affected PPI series. (See "Calculating Index Changes," below.) The 1982 reference base is not used for commodity indexes with a base later than December 1981 or for industry net output indexes and their products. The FD-ID indexes typically have a reference base of November 2009 = 100.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, "Producer Prices," in the *BLS Handbook of Methods*. This chapter can be downloaded from the BLS Web site at [www.bls.gov/opub/hom/homch14.htm](http://www.bls.gov/opub/hom/homch14.htm).

## Calculating Index Changes

Each PPI measures price changes from a reference period that equals 100.0. An increase of 5.5 percent from the reference period in the Final Demand Goods Price Index, for example, is shown as 105.5. This change also can be expressed in dollars, as follows: prices received by domestic producers of a sample of final demand goods have risen from \$100 in November 2009 to \$105.50. Likewise, a current index of 90.0 would indicate that prices received by producers of final demand goods are 10 percent lower than they were in November 2009.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points. Index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

### Index point change

Final Demand Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5

### Index percent change

Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034 x 100
Equals percent change	3.4

## Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, BLS publishes seasonally adjusted and unadjusted changes each month. Seasonally adjusted data are preferred for analyzing general price trends in the economy because these data eliminate the effect of changes that normally occur at about the same time, and in about the same magnitude, every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying trends. Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited when escalating long-term contracts such as purchasing agreements or real estate leases. For more information, see *Escalation Guide for Contracting Parties*, on the Web at [www.bls.gov/ppi/ppiescalation.htm](http://www.bls.gov/ppi/ppiescalation.htm).

In 1998, the PPI implemented the X-12-ARIMA Seasonal Adjustment Method; prior to that year, PPI employed the X-11 method. Each year, the seasonal status of most commodity indexes is reevaluated to reflect more recent price behavior. Industry net output indexes are not seasonally adjusted. For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data from the prior 5 years. Updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or an aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than does the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for FD-ID indexes are derived indirectly through an aggregative method that combines movements of a wide variety of subproduct class (six-digit) series.

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it; if the pattern keeps shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products, but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the Persian Gulf War. In this case, intervention techniques allowed for better estimates of

seasonally adjusted data. On the whole, very few series have required intervention. Out of almost 300 seasonally adjusted series, only 31 were subject to intervention in 2013.

For more information relating to seasonal adjustment methods, see (1) “Appendix A: Seasonal Adjustment Methodology at BLS,” in the *BLS Handbook of Methods* (July 2010), (2) “Summary of Changes to the PPI’s Seasonal Adjustment Methodology” in the January 1995 issue of *Producer Price Indexes*, and (3) “PPI and CPI Seasonal Adjustment: an Update” in the July 2010 *Monthly Labor Review*.

## Producer Price Index Data on the Internet

In 1995, the BLS began posting PPI series, news releases, and technical information to both a World Wide Web (WWW) site and a file transfer protocol (FTP) site. During the years following the introduction of PPI Internet services, use of these sites eclipsed more traditional methods of data dissemination, such as subscriptions to the *PPI Detailed Report*. There were more than 5 million instances of PPI data and tables being downloaded from the Internet during the 12 months ended December 31, 2012.

## Retrieving PPI data from the PPI Web site

PPI data can be obtained from the WWW address ([www.bls.gov/ppi](http://www.bls.gov/ppi)). Clicking on the “PPI Databases” link reveals the following methods of data retrieval:

- **Top Picks** is a form-based application for both Industry Data and Commodity Data that allows the user to quickly obtain PPI time series data by selecting the high-level aggregate and other commonly requested time series, including the All Commodities Index and the FD-ID indexes (for example, Final Demand). Within each list, any one—or all—of the time series shown can be selected. A user can modify the date range and output options after executing the query, using the reformat button above the data output table.
- **One-Screen Data Search and Multi-Screen Data Search** are form-based query applications for both Industry Data and Commodity Data designed for users unfamiliar with the PPI coding structure. These applications guide a user through the PPI classification by listing index titles and do not require knowledge of commodity or industry codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. Two options are available to create customized tables, depending on a user’s browser capability. The one-screen option is a JavaScript application that uses a single screen to guide a user through the available time series data. The second option is a multiple-screen, non-Java-based application. Both methods allow a user to browse the PPI coding structure and select multiple series. Users can modify the date range and output options after executing the query using the reformat button above the data output table.

- **Series Report** is a form-based application that allows users to input multiple, formatted PPI time series identifiers (commodity or industry codes) as inputs in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for users who are familiar with the format of PPI time series identifiers. There are five alphabetic prefixes used to create unique PPI time series identifiers: WP, WD, PC, PD, and ND. Each provides the user access to a different PPI database. Adding either a “u” (not seasonally adjusted) or an “s” (seasonally adjusted) to the end of these prefixes further specifies the type of data needed.

## EXAMPLES

**For commodity and FD-ID indexes**, series identifiers combine a “wpu” prefix (not seasonally adjusted) or a “wps” prefix (seasonally adjusted) with a commodity code.

<u>Commodity code</u>	<u>Provides data for:</u>
wps141101	Passenger cars, seasonally adjusted
wpu141101	Passenger cars, not seasonally adjusted
wpu4	Final demand, not seasonally adjusted

**For discontinued commodity indexes**, series identifiers combine a “wdu” prefix (not seasonally adjusted) or a “wds” prefix (seasonally adjusted) with a commodity code.

<u>Commodity code</u>	<u>Provides data for:</u>
wds019	Other farm products, seasonally adjusted
wdu0635	Preparations, ethical (prescription), not seasonally adjusted
wdusi138011	Stainless steel mill products, not seasonally adjusted

**Current price indexes grouped by industry according to NAICS** have series identifiers that begin with the prefix “pcu.” After the prefix, there are 12 digits (the 6-digit industry code is listed twice) followed by up to 7 alphanumeric characters identifying product detail. Dashes are used as placeholders for higher-level industry group codes.

<u>Industry-product code, current NAICS series</u>	<u>Provides data for:</u>
pcu325---325---	Chemical manufacturing
pcu336110336110	Automobile and light duty motor vehicle manufacturing
pcu621111621111411	Offices of physicians, one- and two-physician practices and single-specialty group practices, general/family practice

**Discontinued industry-product codes based on SIC** combine a “pdu” prefix and “#” between the fourth and fifth characters of the product code. Series identifiers for the discontinued dataset use underscores as placeholders to complete a reference to an SIC industry group code of fewer than four digits. (All PPI industry-based indexes organized by SIC were discontinued with the introduction of NAICS in 2004.)

<u>Industry-product code, discontinued SIC series</u>	<u>Provides data for:</u>
pdu28_#	Chemicals and allied products
pdu331_#	Blast furnaces, steel works, and rolling and finishing mills
pdu3711#111	Passenger cars

**Price indexes for discontinued series grouped by industry according to NAICS** have identifiers that begin with the prefix “ndu.” After the prefix, there are 12 numeric digits (the 6-digit industry code is listed twice), and up to 7 additional alphanumeric characters that identify product detail. Dashes are used as placeholders for higher-level group codes.

<u>Industry-product code, discontinued NAICS series</u>	<u>Provides data for</u>
ndu212231212231	Lead and zinc ore mining
ndu2122312122312	Lead, zinc concentrates
ndu212231212231214	Lead concentrates

- **Text Files (FTP)** and the FTP server are best suited for users requiring access to either a large volume of time series data or other PPI-related documentation (such as seasonal factor and relative importance tables). The FTP site can be accessed at <ftp://ftp.bls.gov> or directly from the links on the “PPI Databases” page or the PPI homepage. Data and documentation available for download include the following:

	<u>Directory:</u>
Industry Data	<a href="ftp://pub/time.series/pc">/pub/time.series/pc</a>
Industry Data - Discontinued (NAICS basis)	<a href="ftp://pub/time.series/nd">/pub/time.series/nd</a>
(SIC basis)	<a href="ftp://pub/time.series/pd">/pub/time.series/pd</a>
Commodity Data (incl. FD-ID)	<a href="ftp://pub/time.series/wp">/pub/time.series/wp</a>
Commodity Data – Discontinued	<a href="ftp://pub/time.series/wd">/pub/time.series/wd</a>
Special requests	<a href="ftp://pub/special.requests/ppi">/pub/special.requests/ppi</a>

## Additional information

The PPI homepage ([www.bls.gov/ppi](http://www.bls.gov/ppi)) contains additional information regarding PPI data and methodology. The top section of the homepage provides PPI news releases, both current and archived, as well as general PPI information. The “PPI Tables” section found beneath the statistics section provides relative importance and seasonal factor tables. The remaining sections offer special notices and publications pertaining to PPI methodology and applications.

For questions or comments regarding PPI data classification, methodology, or data availability on the Internet, call or e-mail the Section of Index Analysis and Public Information at (202) 691-7705 or [ppi-info@bls.gov](mailto:ppi-info@bls.gov).

1 Further information about these experimental producer price indexes is available online at <https://www.bls.gov/ppi/experimentalaggregation.htm>

2 Comprehensive relative importance figures are initially computed after the publication of December indexes and are recalculated after final December indexes are available. Individual items and subtotals may not add exactly to totals because of rounding differences.

3 The indexes for April 2013 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

4 PPI defines Total finished as including only the personal consumption and private capital investment portions of final demand.

5 Trade indexes measure changes in margins received by wholesalers and retailers.

6 Indexes in this table are seasonally adjusted using the indirect seasonal adjustment method. However, this index presently is constructed using only component indexes that are not seasonally adjusted. Therefore, other than potential differences in index levels and related rounding differences in percentage changes, the unadjusted and seasonally adjusted versions of this index currently are identical.

7 The PPI definition of foods does not include food and beverages for immediate consumption. PPI defines food and beverages for immediate consumption as the service of preparing meals, snacks, and beverages to customer order for immediate on-premises and off-premises consumption.

8 Distributive services include transportation, warehousing, and trade of goods.

"-" Data not available.

1 Further information about these experimental producer price indexes is available online at <https://www.bls.gov/ppi/experimentalaggregation.htm>

2 Comprehensive relative importance figures are initially computed after the publication of December indexes and are recalculated after final December indexes are available. Individual items and subtotals may not add exactly to totals because of rounding differences.

3 The indexes for April 2013 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

4 Indexes in this table are seasonally adjusted using the indirect seasonal adjustment method. However, this index presently is constructed using only component indexes that are not seasonally adjusted. Therefore, other than potential differences in index levels and related rounding differences in percentage changes, the unadjusted and seasonally adjusted versions of this index currently are identical.

"-" Data not available.

**Table 4. Producer price indexes and percent changes for selected commodity groupings by final demand category<sup>1</sup>**  
**[1982=100, unless otherwise indicated]**

Grouping	Commodity code	Other index base	Unadjusted index			Unadjusted percent change to Aug. 2013 from:		Seasonally adjusted percent change from:

1 Further information about these experimental producer price indexes is available online at <https://www.bls.gov/ppi/experimentalaggregation.htm>

2 The indexes for April 2013 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

3 Not seasonally adjusted.

4 Trade indexes measure changes in margins received by wholesalers and retailers.

"-" Data not available.

NOTE: The term "(partial)" denotes incomplete coverage of the index category.

**Table 5. Producer price indexes and percent changes for selected commodity groupings of intermediate demand by commodity type category<sup>1</sup>**

1 Further information about these experimental producer price indexes is available online at <https://www.bls.gov/ppi/experimentalaggregation.htm>

2 The indexes for April 2013 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

3 Not seasonally adjusted.

4 Trade indexes measure changes in margins received by wholesalers and retailers.

"-" Data not available.

NOTE: The term "(partial)" denotes incomplete coverage of the index category.

**Table 6. Producer price indexes and percent changes for selected commodity groupings of intermediate demand by production flow category<sup>1</sup>**

Final demand less foods.....	04/10	107.0	106.9	106.8	107.4	107.7	108.1
Final demand less energy.....	04/10	106.5	106.5	106.4	106.8	107.2	107.4
Total finished <sup>2</sup> .....	01/10	107.2	107.0	107.0	107.6	108.0	108.3
Total exports.....	04/10	109.7	109.3	109.2	109.6	109.8	109.5
Total Government purchases.....	04/10	108.0	107.5	107.5	107.9	108.2	108.6
Total private capital investment (goods, services, and construction).....	04/10	104.8	105.1	105.1	105.3	105.7	106.2
Finished goods <sup>2</sup> .....	00/82	196.3	194.8	195.8	197.4	197.4	197.9
Processed materials less foods and feeds.....	00/82	201.3	200.1	199.9	201.0	200.7	201.3
Processed foods and feeds.....	00/82	206.2	203.9	206.2	207.6	210.1	205.2
Processed energy goods.....	00/82	210.8	207.0	207.6	211.8	212.4	213.7
Processed materials less foods and energy.....	00/82	194.5	194.1	193.8	193.9	193.4	193.7
Unprocessed materials less agricultural products.....	00/82	263.4	265.2	271.7	272.5	280.0	276.1
Unprocessed energy materials.....	00/82	220.7	225.8	237.5	238.2	247.7	241.1
Unprocessed nonfood materials less energy.....	00/82	365.8	355.8	349.2	349.5	348.5	347.1
Total goods inputs to stage 4 intermediate demand.....	04/10	110.0	109.4	109.5	110.0	110.0	110.1
Total services inputs to stage 4 intermediate demand.....	04/10	105.8	106.3	106.0	106.2	106.5	107.0
Total goods inputs to stage 3 intermediate demand.....	04/10	112.7	112.3	112.7	113.1	112.6	112.4
Total services inputs to stage 3 intermediate demand.....	04/10	106.1	106.5	105.9	106.4	106.4	106.6
Total goods inputs to stage 2 intermediate demand.....	04/10	112.1	111.7	113.9	114.3	116.3	114.2
Total services inputs to stage 2 intermediate demand.....	04/10	105.7	106.1	105.1	105.2	105.6	106.0
Total goods inputs to stage 1 intermediate demand.....	04/10	107.5	105.7	105.5	106.3	106.3	106.8
Total services inputs to stage 1 intermediate demand.....	04/10	108.3	108.6	108.3	108.4	109.1	109.8

<sup>1</sup> All seasonally adjusted indexes are subject to change up to 5 years after original publication due to the recalculation of seasonal factors each January. The indexes for April 2013 have been recalculated to incorporate late reports and corrections by respondents.

<sup>2</sup> PPI defines Total finished as including only the personal consumption and private capital investment portions of final demand.

**Table 8. Producer price indexes for selected commodity groupings, not seasonally adjusted**  
[1982=100, unless otherwise indicated]

Grouping	Commodity code	Other index base	Index			Percent change to Aug. 2013 from:	
			Apr. 2013 <sup>1</sup>	July 2013 <sup>1</sup>	Aug. 2013 <sup>1</sup>	Aug. 2012	July 2013
Goods							
All commodities.....			203.5	204.6	204.3	0.8	-0.1
Farm products, processed foods and feeds.....			203.0	207.0	202.9	-0.8	-2.0
Farm products.....	01		196.1	200.7	191.1	-4.2	-4.8
